

# Embedding existing Echo360 video into Brightspace D2L

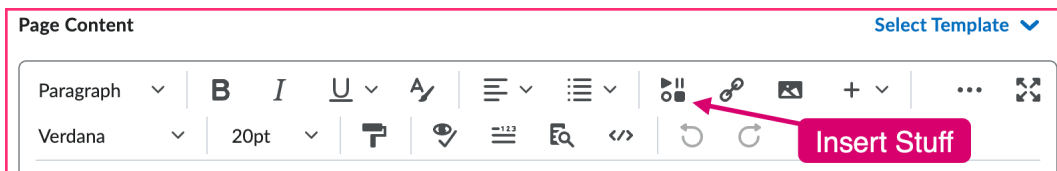

Publish a capture or video to your LMS from your content Library.

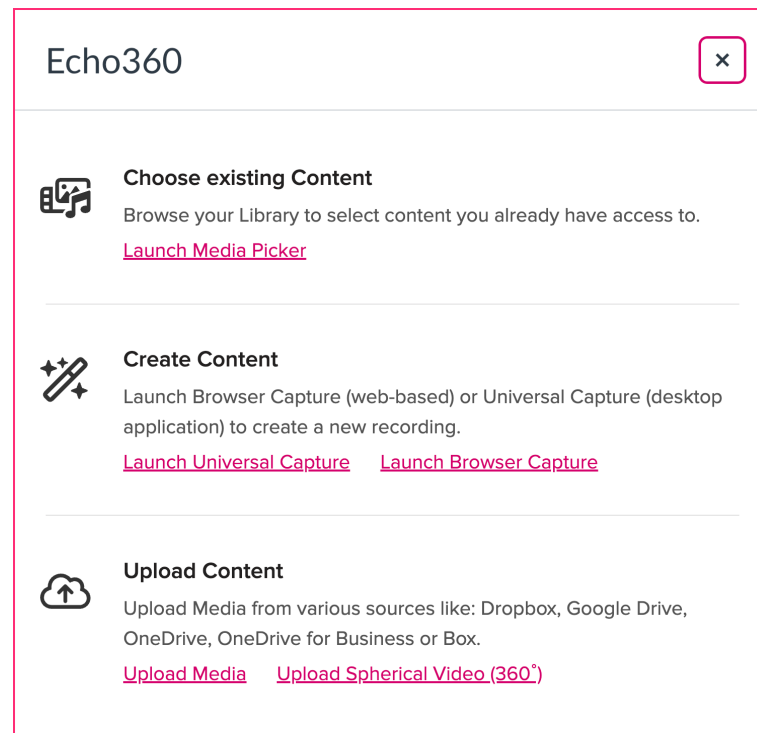

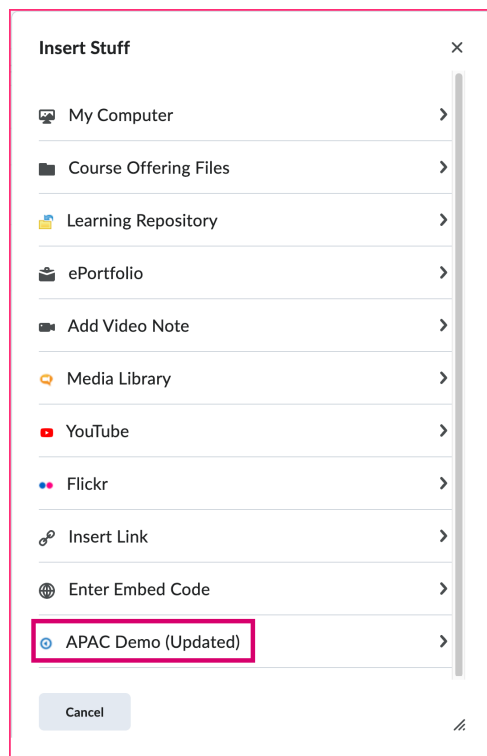

## Easy Embed button

The text editors in D2L have a content embed button (also called an "easy embed button") that appears in the editing toolbar of all content windows. (e.g discussion, assignment, pages etc)

1. Log in to D2L, open the course you want to post the video to and select the item type. For example, page, assignment, discussion.
2. Easy Embed is located under the insert stuff icon in the content editors.

3. Under insert stuff, select the Echo360 easy embed link, usually represented by the Echo360 icon. 

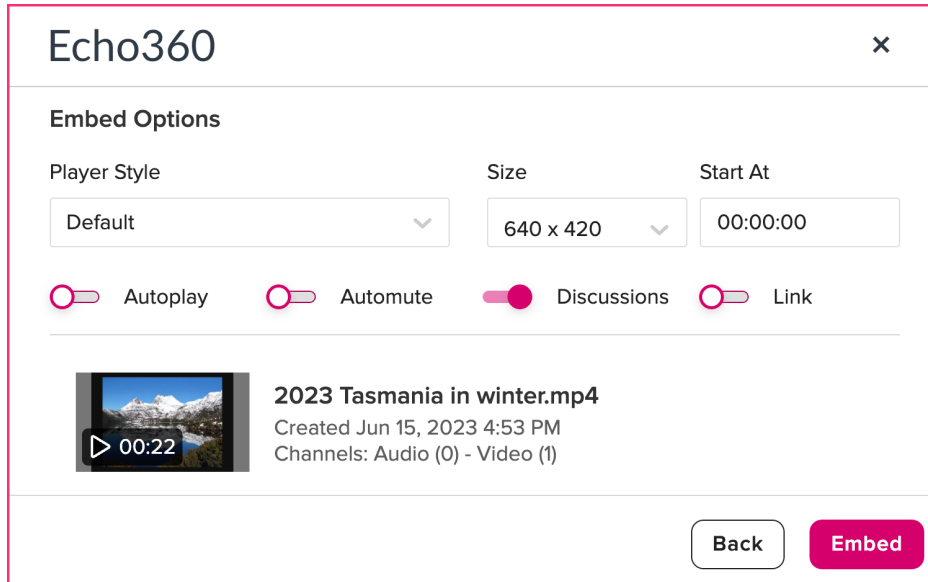

4. You have the choice to **Choose existing Content** from your EchoVideo library, **Create Content** using the Universal Capture desktop software or Browser Capture, or **Upload Content** from your computer/device or a cloud location.
5. If you upload or create content, it is automatically copied to your EchoVideo library. This will allow you to re-use your content in multiple locations within D2L, even across different courses.

## Choosing display options for your video

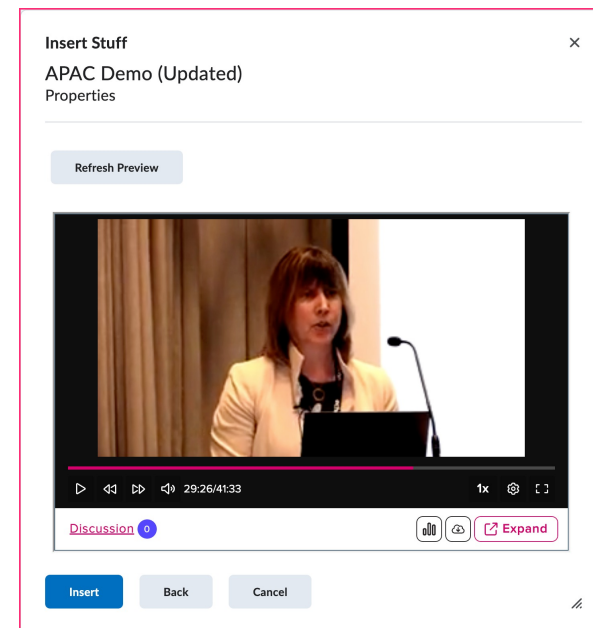

1. If your institution has created custom player styles to choose from, the Player Style drop-down list will appear. Select the style you want to be applied to the player.

2. From the Size drop-down list, select the size you want for the embedded video. There are four size options.
3. If appropriate, enable other options such as Autoplay or set a Start At time if needed.
4. When finished, click **Embed**.

A preview of the inserted video appears ready to insert when ready.

Note : If you prefer to use links to your videos, set your video options and toggle on Link.
